

## Paraloop

Body: choice of dry fly body  
Tail: choice  
Hackle: choice of cock hackle  
Post: nylon monofil 4lb

Tie in your choice of tail and body, ending the body hardly farther forward than half the shank. [1]  
Tie in a loop of 4lb monofil [2]  
Tie in a cock hackle (lashing down to the shank to the eye, finish with thread back by the monofil) [3]  
Apply your choice of thorax material, finishing with thread behind the eye. [4]  
Holding the nylon loop tight, wind the hackle up 3/4 turns and back down 3/4 turns, the turns being rather open. Secure the hackle. [5]  
Compress the hackle windings downward by pulling the nylon loop open fairly tightly (not so tight as to cut the hackle stem) [6]  
Pull the nylon forward and down to the eye while sweeping the hackle back. Secure the nylon behind the eye. [7]  
Whip finish. [8]
